

In this article I'm going to talk about Field template.

So what's the problem?

Problem is that some people have a problem with remarkable.

Let's see the below picture

There are actually three container fields, fields-items and fields-item even, and then after body field is there.

So that's a lot of stuff and some people want to have full control over it.

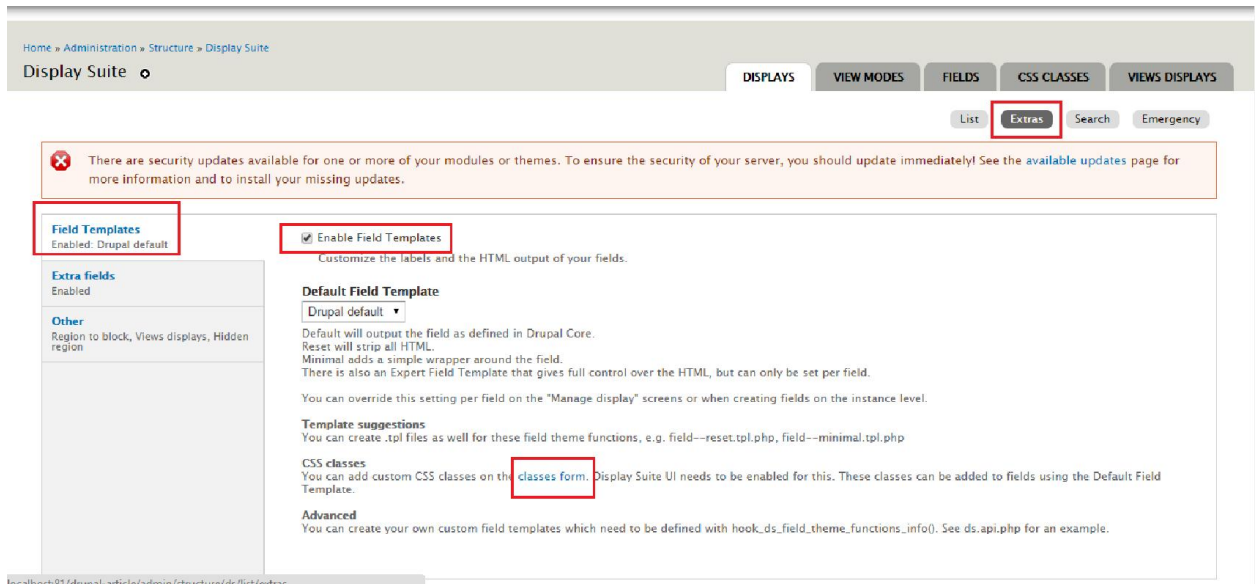

There is a possibility to override template file from drupal core if you like.

But display suite enables to control this through the user interface if you want.

And you also able to change labels.

You can always use it when you are working on themeing or creating functions, use interface is easy to manage this.

1. Go to structure > display suite
2. Click on Extra tab at top right side of the page. And **Enable Field Templates**

3. Save the settings.
4. So there is nothing really happen.
5. Your things that happen right now for giving style form Styles just click on Classes form link I shown in above picture with square box.
6. There is textarea for **CSS classes for fields**.
7. We previously talk about classes and region.
8. Now just add some classes in textarea.

CSS classes for regions

class-1|class number one
class-2|class number two

Configure CSS classes which you can add to regions on the "manage display" screens. Add multiple CSS classes line by line. If you want to have a friendly name, separate class and friendly name by |, but this is not required. eg:
class_name_1
class_name_2|Friendly name
class_name_3

CSS classes for fields

fields-class-1|field class number one
fields-class-2|field class number two

Configure CSS classes which you can add to fields on the "manage display" screens. Add multiple CSS classes line by line. If you want to have a friendly name, separate class and friendly name by |, but this is not required. eg:
class_name_1
class_name_2|Friendly name
class_name_3

Save configuration

9. Let's save it.
10. Now go to the display tab from top of the page. And click on manage display link.

Home » Administration » Structure

Display Suite 

DISPLAYS VIEW MODES FIELDS CSS CLASSES VIEWS DISPLAYS

List Extras Search Emergency

 There are security updates available for one or more of your modules or themes. To ensure the security of your server, you should update immediately! See the [available updates](#) page for more information and to install your missing updates.

CONTENT	OPERATIONS
Article	Manage display - Manage form
Basic page	Manage display - Manage form

11. Now scroll down the page click on **Custom display settings** and enable **full content** then save it.

12. I'm going to style full content.

13. Let's add some field in different region.

- Author and post date in Header.
- Body in left region.
- Image in right region.
- Comments in footer.

14. Then save the settings and then click on config icon at left side of the screen.

 There are security updates available for one or more of your modules or themes. To ensure the security of your server, you should update immediately! See the [available updates](#) page for more information and to install your missing updates.

 Your settings have been saved.

Show row weights

FIELD	REGION	LABEL	FORMAT	
Header				
 Author	Header	<Hidden>	Author	Field template: Full Reset 
 Post date	Header	<Hidden>	Long	Field template: Full Reset 
Left				
 Body	Left	<Hidden>	Default	Field template: Full Reset 
Right				
 Image	Right	<Hidden>	Image #	Image style: Medium (220x220) Field template: Full Reset 

Click here for configuration

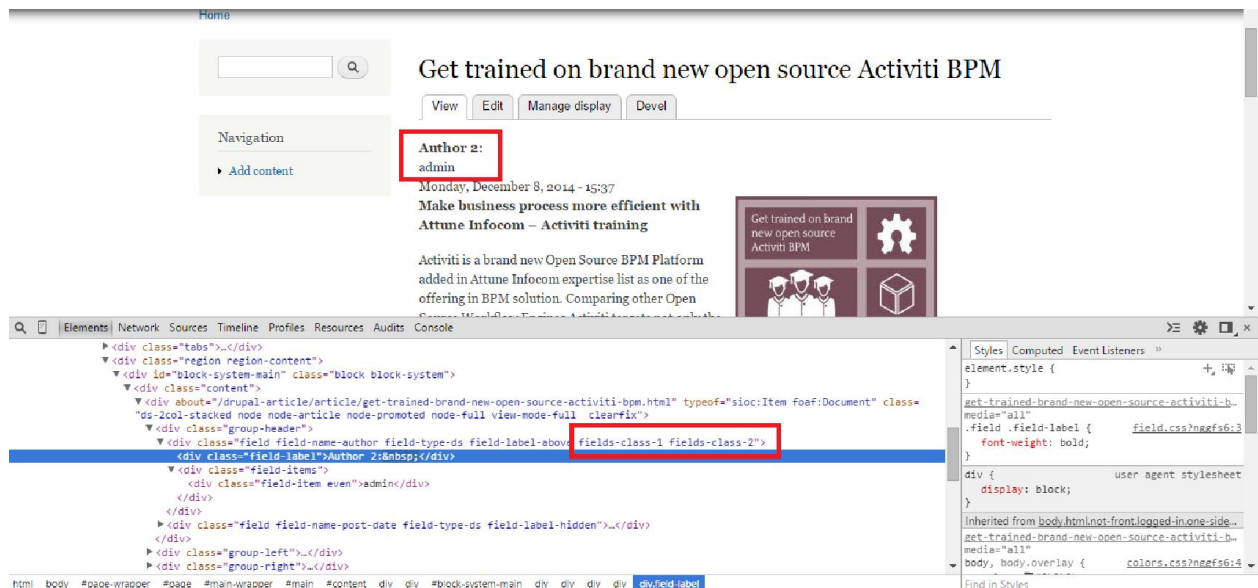

15. In next screen you can see configuration.

- In **Choose a Field Template** you can select Full reset, minimal and expert but we go with default.
- Choose additional css classes for the field.
- Give the Label (e.g. Author 2) to override current label.
- Click on Update button to save the settings.

The screenshot shows the 'FIELD' configuration page for a field named 'Header'. The 'LABEL' column shows 'Header' and the 'FORMAT' column shows '<Hidden>'. On the right, the 'Choose a Field Template' dropdown is set to 'Drupal default'. Below it, the 'Choose additional CSS classes for the field' dropdown is set to 'None'. The 'Label' text field contains 'Author 2'. The 'Update' button is highlighted with a red box.

16. Now again save the settings.

17. Go to the home page and refresh the page. You can see that the label for author is changed to Author 2. You can also check CSS classes by inspecting the element for author that we previously gave.

18. Now let's go to the body.

- Click on the configuration button beside at left side of the screen.

- b. And Choose a Field Template to Reset.
- c. Click on Update button to save settings.

FIELD	REGION	LABEL	FORMAT	
Header				
+ Author 2 (Original: Author)	Header ▼	Above ▼	Author ▼	Field template: Drupal default ⚙
+ Post date	Header ▼	<Hidden> ▼	Long ▼	Field template: Drupal default ⚙
Left				
+ Body	Left ▼	<Hidden> ▼	Format settings: Default Choose a Field Template <div style="border: 2px solid red; padding: 2px;">Full Reset ▼</div> Label <input type="text"/> <div>Update Cancel</div>	

19. Save the settings.
20. Go to the home page and open any article page.
21. Let's check how the body field look likes before refresh the page.

The screenshot shows a web browser displaying an article page. The article title is "Get trained on brand new open source Activiti BPM" by "Author 2: admin". The article content is partially visible, showing a paragraph about Activiti BPM. The browser's developer tools are open, showing the HTML structure of the page. A red box highlights the following HTML structure in the "Elements" panel:

```

<div class="field field-name-body field-type-text-with-summary field-label-hidden">
  <div class="field-items">
    <div class="field-item even" property="content:encoded">
      <p>...</p>
    </div>
  </div>
</div>

```

The "Styles" panel on the right shows the default styles for the paragraph element, including display: block, margin: 0 0 1.2em, and padding: 0.

22. So, there are three container classes are here and then after body field is there.
23. Just refresh the page to check.

24. You can see that three container classes are removed.

25. There is also one option available is called Expert in Configuration which gave you total control over makeable fields.

Choose a Field Template

Expert

Prefix

You can enter any html in here.

Label	Element	Classes	Attributes	<input type="checkbox"/> Hide label colon
	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="checkbox"/> Add default attributes
	E.g. div, span, h2 etc.	E.g. field-name-body	E.g. name="anchor"	

☐ Label wrapper

<input checked="" type="checkbox"/> Outer wrapper	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="checkbox"/> Add default attributes
	E.g. div, span, h2 etc.	E.g. field-name-body	E.g. name="anchor"	<input type="checkbox"/> Add default classes
<input checked="" type="checkbox"/> Field items	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="checkbox"/> Add default attributes
	E.g. div, span, h2 etc.	E.g. field-name-body	E.g. name="anchor"	
<input checked="" type="checkbox"/> Field item	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="checkbox"/> Add odd/even classes
	E.g. div, span, h2 etc.	E.g. field-name-body	E.g. name="anchor"	<input type="checkbox"/> Add default attributes

Suffix

You can enter any html in here.

Update Cancel

26. You can choose an outer wrapper, Field items, Field item and also control label and its wrapper classes or element or attribute.

27. So let's we add span tag in Element and demo class in classes from in Outer Wrapper.

28. Click on update.

Choose a Field Template

Expert

Prefix

You can enter any html in here.

Label Element Classes Attributes

E.g. div, span, h2 etc. E.g. field-name-body E.g. name="anchor"

☐ Label wrapper

☒ Outer wrapper

Element: span

Classes: demo-class

Attributes: ☐ Add default attributes

☐ Field items

☐ Field item

Suffix

You can enter any html in here.

Update Cancel

29. Again Save the Settings.'

30. Go to the home page and open any article page. Refresh the page.

31. Inspect the elements.

32. What is happening right now there is span tag with class name body inside demo-class.

Body:

Make business process more efficient with Attune Infocom – Activiti training

Attune Infocom is a brand new Open Source BPM Platform added in Attune Infocom expertise list as one of the offering in BPM solution. Comparing other Open Source Workflow Engines Activiti targets not only the technical execution of processes, but the Business-IT-Alignment as well. Activiti builds on top of the global Standard BPMN 2.0, while staying developer friendly. We are one of the pioneer offering Activiti BPM training in global market.

Elements

```
<div class="content">
  <div about="/drupal-article/article/get-trained-brand-new-open-source-activiti-bpm.html" typeof="sioc:Item foaf:Document" class="ds-2col-stacked node-article node-promoted node-full view-mode-full clearfix">
    <div class="group-header"></div>
    <div class="group-left">
      <span class="demo-class">
        <div class="label-inline">Body:&nbsp;</div>
      </span>
    </div>
  </div>
</div>
```

Styles

```
element.style {
}

Inherited from body.html:not-front:logged-in-one-side-...
get-trained-brand-new-open-source-activiti-b-
media="all"
body, body.overlay {
  color: #3b3b3b;
}

get-trained-brand-new-open-source-activiti-b-
media="all"
body, #site-slogan, .ui-
widget, .comment-form label {
  font-family: Georgia, "Times New Roman",
  Times, serif;
}
```

33. So, we have total control over body.

34. There is another cool option called Hide label colon to hide colon after body label.

35. To do this we have to enable label for body.

36. Click on Hide label colon checkbox. Also you can override the label and give class and elements and attributes also.

37. And click on update button.

Body Left Inline

Format settings: Default

Choose a Field Template

40. So you can see that label is printed but colon after label is not there.

41. Using this we have a full control to manage field template.
